

INTISARI

Penelitian ini bertujuan untuk mengetahui pengaruh *environmental perfomance*, *environmental disclosure*, dan *return on asset* (ROA) terhadap *economic performance*. Jenis dari penelitian yang dilakukan adalah jenis penelitian dengan pengujian hipotesis (*Hypothesis testing*) yang merupakan penelitian dalam menjelaskan fenomena hubungan antara variabel. Data yang digunakan dalam penelitian ini bersumber dari laporan keuangan tahunan serta laporan keberlanjutan perusahaan pertambangan umum dan industri dasar yang terdaftar di BEI dan PROPER tahun 2010-2011ndengan total 13 perusahaan. Analisis hipotesis yang digunakan dalam penelitian ini menggunakan regresi linier berganda dan sebelum dilakukan uji hipotesis telah dilakukan uji normalita data.

Dari pengujian hipotesis diperoleh hasil bahwa *environmental performance* memiliki pengaruh terhadap *economic performance*. Hasil pengujian pada hipotesis kedua menunjukkan bahwa *environmental disclosure* tidak berpengaruh secara signifikan terhadap *economic performance*. Dan hasil pada hipotesis ketiga menunjukkan bahwa *return on asset* (ROA) berpengaruh secara signifikan terhadap *economic performance*. Temuan pertama dalam penelitian ini mendukung temuan Suratno, dkk (2006) dan Al-Tuwaijri, et al. (2004). Sedangkan temuan yang kedua mendukung temuan Freedman dan Jaggi (1992).

Kata kunci : *environmental performance*, *environmental disclosure*, *return on asset* (ROA), *economic performance*, PROPER

ABSTRACT

The objective of this study is to determine the impact of environmental performance, environmental disclosure and return on asset (ROA) to economic performance. This type of research conducted is the type of research by testing the hypothesis (Hypothesis testing) which is a study in explaining the phenomenon of the relationship between variables. Data used in this study come from annual reports and sustainable report of basic industries and mining companies listed on the Indonesia stock Exchange and PROPER in 2010-2012 with a total of 13 companies. Analysis of the hypothesis used in this study using multiple linear regression and prior to hypothesis testing has been conducted test data normality.

From the results obtained by testing the hypothesis that environmental performance affect the economic performance. Test results on the second hypothesis also suggests that environmental disclosure is not significantly influence economic performance. And the result of the third hypothesis suggests that return on asset (ROA) is significantly influence the economic performance. The first findings of the research findings do not support Suratno, et al (2006) and Al-Tuwaijri, et al. (2004). While the latter findings support the findings of Fredman and Jaggi (19982)

Key words : environmental performance, environmental disclosure, return on asset (ROA), economic performance, PROPER
