## KATA PENGANTAR

Assalamu'alaikum, Wr. Wb.

Alhamdulillah, segala puji dan syukur penulis panjatkan ke hadirat Allah SWT. karena atas karunia dan rahmat-Nyalah penulis dapat menyelesaikan Karya Tulis Ilmiah yang berjudul "Penilaian Faktor-Faktor yang Terkandung dalam Visum et Repertum Oleh DOKter UGD di Rumah Sakit PKU Muhammadiyah Yogyakarta Tahun 2009" untuk memenuhi syarat memperoleh gelar derajat Sarjana Kedokteran di Fakultas Kedokteran dan Ilmu Kesehatan Universitas Muhammadiyah Yogyakarta.

Penulis menyadari sepenuhnya keterbatasan yang penulis miliki, tanpa kerja keras, dan bantuan dari semua pihak serta pertolongan Allah SWT, maka Karya Tulis Ilmiah ini tidak dapat terselesaikan dengan baik. Pada kesempatan ini, izinkanlah penulis untuk menyampaikan terima kasih kepada :

1. Allah SWT yang senantiasa memberikan rahmat dan karunia-Nya.
2. dr. H. Erwin Santosa, Sp.A, M.Kes. selaku Dekan Fakultas Kedokteran dan Ilmu Kesehatan Universitas Muhammadiyah Yogyakarta.
3. dr. R. Soegandhi, Sp.F(K) selaku dosen pembimbing Karya Tulis Ilmiah yang telah meluangkan waktu untuk membimbing, mengarahkan dan memotivasi penulis.
4. dr. Dirwan Suryo Soularto selaku dosen penguji.
5. Kedua orang tua tercinta, Hidayat Boesran dan Mariani, terima kasih atas

## Introduction

The purpose of this study is to investigate the effects of a new educational program on student learning outcomes. The program, which was implemented in the fall of 2020, focuses on enhancing critical thinking and problem-solving skills through a series of interactive activities and projects. The study aims to determine whether the program has a significant impact on students' performance in various subjects and to identify any factors that may influence the effectiveness of the program. The research is based on a quasi-experimental design, comparing the performance of students who participated in the program (the experimental group) with those who did not (the control group) over a period of six months. Data were collected through standardized tests and classroom observations, and analyzed using statistical methods to assess the significance of the findings.

The study is organized into several sections. The first section provides a detailed description of the educational program, including its objectives, components, and implementation process. The second section outlines the research methodology, detailing the selection of participants, the design of the study, and the data collection procedures. The third section presents the results of the study, showing the performance of the experimental and control groups on various measures of learning outcomes. The fourth section discusses the implications of the findings, highlighting the strengths and limitations of the program and providing recommendations for future research and practice. Finally, the study concludes with a summary of the key findings and a statement of the overall contribution to the field of education.

Chapter 1

Background and Rationale for the Study

The current educational landscape is characterized by rapid technological advancements and a growing emphasis on 21st-century skills, such as critical thinking, problem-solving, and collaboration. However, traditional educational models often fail to adequately address these needs, leading to a gap between what is taught in schools and what is required in the workforce. This study seeks to bridge this gap by evaluating the effectiveness of a program designed to explicitly teach and reinforce these skills through a hands-on, project-based approach.

6. Kakak saya, Chandri Arinie Hidayat, S.KG yang senantiasa memberikan arahan, ide-ide, bantuan dan motivasi.
7. dr. H. Ahmad Hidayat, Sp. OG. M.Kes. selaku Direktur Utama RS PKU Muhammadiyah Yogyakarta.
8. dr. Taufik Hikmawan YBS dan Bapak Edy Supriyanto, Amd. selaku pembimbing dari RS PKU Muhammadiyah Yogyakarta.
9. Seluruh staf tata usaha FKIK UMY yang telah banyak membantu penulis.
10. Sahabat semasa perkuliahan, Mia, Cinta dan Sarah, terima kasih atas dukungan dan bantuannya.
11. Teman satu bimbingan KTI, Hera, Hindri, Wita, Anita dan Bogita.
12. Sahabat yang selalu mendukung walaupun jarang bertemu, Rifda, Dianty, Yeni, Salindri dan Satria.
13. Teman-teman seperjuangan Pendidikan Dokter UMY angkatan 2006.
14. Semua pihak yang tidak dapat penulis sebutkan satu per satu yang telah banyak membantu dalam menyelesaikan Karya Tulis Ilmiah ini.

Penulis menyadari bahwa Karya Tulis Ilmiah ini masih jauh dari sempurna. Penulis mengharapkan saran dan kritik yang membangun dari para pembaca. Penulis berharap semoga Karya Tulis Ilmiah ini dapat bermanfaat bagi penulis khususnya dan pembaca pada umumnya. Amin.

Wassalamu'alaikum Wr. Wb.

Yogyakarta, 18 Juni 2010

Penulis

1. The first step in the process of identifying a problem is to recognize that a problem exists. This is often done by comparing current performance with a desired state or goal. For example, a manager might notice that sales are declining or that customer satisfaction is low. Once a problem is identified, the next step is to define it more precisely. This involves determining the scope of the problem, its causes, and its effects. A clear definition of the problem is essential for developing an effective solution.

2. The second step is to analyze the problem. This involves gathering information about the problem and its context. This can be done through interviews, surveys, or data analysis. The goal is to understand the underlying causes of the problem and to identify any constraints or resources that may affect the solution. A thorough analysis is crucial for developing a solution that addresses the root cause of the problem.

3. The third step is to generate potential solutions. This involves brainstorming ideas and evaluating them against the problem's requirements. It is important to consider a wide range of options and to evaluate them based on their feasibility, effectiveness, and cost. The goal is to identify a solution that is both practical and effective.

4. The fourth step is to select a solution. This involves choosing the best option from the ones generated in the previous step. This decision is often based on a combination of factors, including the solution's effectiveness, cost, and the organization's resources. Once a solution is selected, the next step is to implement it.

5. The fifth step is to implement the solution. This involves putting the chosen solution into action. This may involve developing a plan, allocating resources, and communicating the solution to the relevant stakeholders. It is important to monitor the implementation process closely to ensure that the solution is being implemented correctly and to make any necessary adjustments.

6. The sixth and final step is to evaluate the solution. This involves assessing the effectiveness of the solution and determining whether it has solved the problem. This can be done by comparing current performance with the desired state or goal. If the solution is not effective, it may be necessary to return to an earlier step in the process and re-evaluate the problem or the solution.

1. Introduction

The purpose of this report is to provide a comprehensive overview of the current state of the global economy and its impact on various sectors. This report will analyze the key factors influencing economic growth, including technological advancements, demographic shifts, and environmental challenges. The findings will be presented in a clear and concise manner, supported by relevant data and statistics.

The report is structured as follows: Section 2 discusses the global economic outlook, Section 3 examines the impact of technological innovation, Section 4 explores the role of demographics, and Section 5 addresses environmental sustainability. Finally, Section 6 provides concluding remarks and recommendations for future research.

2. Global Economic Outlook

The global economy has experienced a period of relative stability and growth in recent years, driven by strong demand and robust financial markets. However, there are several key challenges that could impact future growth. One major concern is the potential for a global recession, triggered by a combination of factors such as a sharp decline in oil prices, a slowdown in major economies, or a global health crisis. Additionally, the ongoing trade tensions between major powers, such as the United States and China, have created uncertainty in the global market.

Key indicators of economic health, such as GDP growth, inflation, and unemployment rates, are closely monitored. The International Monetary Fund (IMF) has projected a global growth rate of approximately 3.5% for 2023, which is a slight improvement from the 3.2% projected for 2022. However, this growth is expected to be uneven, with some regions showing stronger performance than others.

3. Technological Innovation

Technological innovation continues to be a major driver of economic growth, with significant advancements in artificial intelligence, robotics, and biotechnology. These innovations are creating new opportunities for businesses and consumers alike, while also raising concerns about job displacement and privacy. The integration of technology into various sectors is expected to accelerate in the coming years, leading to increased productivity and efficiency.
