

## **ABSTRACT**

*This research aimed to examine the partnership model on the management of green open spatial planning in Tanjung Selor, North Kalimantan Focusing on Bunda Hayati City Park as the study case. This research described the less effective performance of the management. There were several stakeholders involved within the management of the park.*

*This research used qualitative descriptive approach to analyze primary and secondary data. The data collection methods was in-depth interview and documentation of secondary data. The findings of the research showed that the management of Bunda Hayati City Park was performed through a partnership model called Solid Partnership with the institute of Agriculture Bandung (IPB) as the main partner. Solid Partnership Model described the extensive network of several stakeholders with the local government in the management of Bunda Hayati City Park. The output of this partnership was a Master Plan for the development of the city park.*

**Keywords** : *Green Open Spatial Planning, Bunda Hayati City Park, Solid Partnership Model.*
