

ABSTRACT

Mother has the most dominant role in a family, its not only taking after the family and keeping the house but also help familys economy. Wooden batik industry in Kreet Village gave job filed for woman workers to make batik. They worked to make carft from wooden material and made it different from the other wooden craft the wood in this wooden batik industry was pointed with batik motif like the one pointed in fabric. This research aimed at analyzing the roles of woman workers in the influence of some characteristics (age, education level, work experience and production number) towards the income of woman workers were using data from 69 samples. The result in table 5.1 showed that the roles of woman workersin wooden batikindustry activity were preparing batik-making tools, making batik motif, colouring/modeling and finishing. The works were side jobs for family income. It could be seen from the percentage of woman worker contribution towards total family income wich was relatively small, i.c. 31%. The factors that influence the amount of income of the workers were education and work experience.

Key words: Woman Roles, Woman Income, Wooden Batik Industry
