

ABSTRACT

Company PT. Mugan Group engaged in services exports and imports of goods that have several branches are scattered around the Area. Regular payroll activity done manually performed on each branch even though rule went into effect the same. The company has financial difficulties to service payroll quickly and have difficulty making payroll financial reports accurately, because all data is recorded using only a book stipend.

In order to address the above problems, PT. Mugan payroll application that requires Group services becomes easier and the financial report data can be presented in a fast and accurate. The financial need of the desktop application that can be operated easily, accelerate payroll service, proof of payment that can be easily printed and stored in the file, as well as financial reports can be presented in a good, complete, and accurate.

The application is built using C # and used for real in pt. Mugan group. Applications built with specifications: shaped desktop application, using the GUI, DBMS, support services, payroll, and reporting system available. The application can be used both with a slight error. From the questionnaires is known proven application program can facilitate payroll services and payroll reports has been meeting the needs of the HRD section.
