

INTISARI

Peningkatan tekanan waktu audit telah memotivasi auditor untuk melakukan perilaku disfungsional yang pada akhirnya dapat mengurangi kualitas audit.

Berdasarkan hal tersebut, penelitian ini bertujuan untuk memberikan bukti empiris mengenai pengaruh tekanan waktu audit terhadap perilaku disfungsional auditor yang meliputi perilaku *premature sign off* dan *underreporting of time*. Kedua, penelitian ini bertujuan untuk memberikan bukti empiris mengenai pengaruh perlaku disfungsional tersebut terhadap kualitas audit. Ketiga, penelitian ini bertujuan untuk memberikan bukti empiris mengenai pengaruh tekanan waktu audit terhadap kualitas audit.

Responden dalam penelitian ini ialah auditor yang bekerja pada Kantor Akuntan Publik yang berada di DI Yogyakarta, Surakarta, dan Semarang. Berdasarkan kondisi tersebut, sebanyak 129 kuesioner yang telah tersebar dan sebanyak 124 kuesioner yang kembali dan dapat diolah.

Data di analisis menggunakan analisis *structural equation model* dengan bantuan program lisrel. Dari hasil analisis mengindikasikan bahwa tekanan waktu audit berpengaruh positif dan signifikan terhadap perilaku disfungsional auditor (*premature sign off* dan *underreporting of time*). Perilaku disfungsional tersebut berpengaruh negatif dan signifikan terhadap kualitas audit. Begitu juga tekanan waktu audit berpengaruh negatif dan signifikan terhadap kualitas audit.

ABSTRACT

Increase in audit time pressure may motivate auditors to do some dysfunctional behaviors and to reduce quality of audit.

Due to such background, this research is aimed to get empirical evidence of the impact of audit time pressure on dysfunctional behavior which is reflected by behaviors of premature sign off and underreporting of time. Secondly, this research is also aimed to get empirical evidence of those empirical behavoirs on quality audit. Thirdly, this research wants to get empirical evidence of he impact time budget pressure on audit quality.

The respondents are auditors of Public Accountants Firm which domicile in DI Yogyakarta, Surakarta, and Semarang. Due to such conditions, total 129 questionnaires were distributed by researcher and only 124 were returned.

Data were analyzed using lisrel and structural equation model. The result indicates that audit time pressure has positive and significant impact on premature sign off and underreporting of time. In contrast, premature sign off and underreporting of time has negative and significant impact on audit quality. Audit time pressure also has negative and significant impact on audit quality.
