

ABSTRACT

This study aims to analyze the influence of capital structure, profitability, firm size and intellectual capital on firm's value. The subjects in this study are manufacturing companies listed Indonesia Stock Exchange during 2010-2014 period.

There are 180 samples from 38 companies selected by using purposive sampling method. Data analysis uses classic assumption tests: normality test, multicollinearity test, autocorrelation test and heteroskedasticity test. Hypothesis test uses multiple regression analysis.

Research results indicate that capital structure does not affect on the firm's value, the profitability a positive significant affect on the firm's value, the firm size positive significant affect on the firm's value and the institutional ownership a positive significant affect on the the firm's value.
