EVALUASI PENGELOLAAN INSTALASI PUSAT STERILISASI RS PKU MUHAMMADIYAH YOGYAKARTA UNIT II

Alwan wijaya

Latar Belakang : Rumah sakit merupakan salah pelayanan kesehatan yang mempunyai fungsi utama penyembuhan, pemulihan dan pencegahan infeksi. Paradigm baru pelayanan rumah sakit mengarahkan seluruh kegiatan harus memenuhi standar kualitas serta jaminan rasa aman dan terhindar dari infeksi. Instalasi pusat sterilisasi sangat strategis dalam upaya pencegahan infeksi dengan membantu unit lain di rumah sakit yang membutuhkan kondisi steril.

Tujuan : Untuk mengevaluasi pelayanan yang diberikan instalasi pusat sterilisasi RS PKU Muhammadiyah Yogyakarta Unit II.

Metode: Desain penelitian kualitatif dengan pendekatan studi kasus digunakan untuk menggali informasi di instalasi pusat sterilisasi. Informan pada penelitian ini sebanyak 4 orang. Pengumpulan data dengan wawancara mendalam, daftar tilik, observasi, serta telusur dokumen.

Hasil Dan Pembahasa : RS PKU Muhammadiyah Yogyakarta unit II belum memiliki pengorganisasian, pengelolaan staf, sarana fisik, dan manajemen yang sesuai dengan pedoman dalam pengelolaan instalasi pusat sterilisasi. Hambatan yang paling dirasakan dalam proses pengembangan instalasi pusat sterilisasi adalah dukungan manajemen yang kurang, kurangnya jumlah SDM, dan kurangnya fasilitas di instalasi pusat sterilisasi.

Saran : Manajemen RS PKU Muhammadiyah Yogyakarta Unit II perlu memperhatikan proses di instalasi pusat sterilisasi, seperti penambahan jumlah SDM, dan fasilitas instalasi pusat sterilisasi.

Abstract

EVALUATION OF PLANT MANAGEMENT CENTRAL STERIL SUPPLY DEPARTMENT IN HOSPITAL PKU MUHAMMADIYAH YOGYAKARTA 2nd UNIT

Alwan wijaya

Abstract

Background: Hospital is one of the health service which has the main function of healing, recovery, and prevention of infection. New Paradigm hospital services directs all activities must meet the quality standards as well as a sense of security and protection from infection. Installation of central sterilization is very strategic in preventing infection with the help of other units in the hospital which require sterile conditions.

Objective: To evaluate the services provided by the installation of central sterilization hospital of PKU Muhammadiyah Yogyakarta Unit II.

Methods: a qualitative study with case study approach design was used to dig up information in center sterilization installation. Informants in this study as four people. Data collection was done by in-depth interviews, checklist, observation, and search documents.

Result: Hospital of PKU Muhammadiyah Yogyakarta unit II did not yet have the organization, management of staff, facility, and management that accordance with the guidelines in the management of central sterilization installation. The most keenly barriers felt in the development installation of central sterilization are lack of support of management, a lack of human resources, and lack of facilities in the installation of central sterilization.

Suggestions: Management of hospital PKU Muhammadiyah Yogyakarta Unit II need to pay more attention to the process in installation of central sterilization, such as increasing the number human resources, and the installation of central sterilization facility.
